DB1 SubApp™ Release History

This list includes only those software versions issued in the general public domain and does not include interim versions that may have been used for internal development or limited beta testing.

Version 1.9.1.0 – issued 2012/12/15

- SubApp installer: Changed server location of Support Library (fresh installs only)
- Fixed errors on opening of saved settings (XML) file
- Improvements to the room compensation algorithm

Version 1.8.5.0 – issued 2010/12/16

- Added support for Windows 7 and Windows Vista 64 bit operating systems
- Improvements to the room compensation algorithm

Version 1.7.0.0 – issued 2010/07/23

- Fixed the 'SC-01 USB soundcard not found' error in room compensation routine when running in certain Windows languages.
- Stopped appearance of charts used for beta testing in room compensation routine

Version 1.6.1.0 – issued 2010/07/05

- Fixed subwoofer connection issue with all markets which use the comma as decimal separator (BR, DE, DK, ES, FR, IT, RU etc.).
- Added crossover settings for Signature Diamond
- Presets correctly displayed after room compensation routine
- Multiple language help file

Version 1.5.4.0 – issued 2010/05/18

- Completed speaker crossover settings for all 800 series models

Version 1.4.0.0 – issued 2010/05/04

- Fixed stability issue.

Version 1.3.0.0 – issued 2010/03/16

- Room compensation measurement routine: Added robustness to mains induced hum in case of incorrect grounding. The DB1 is normally grounded via the line input from the preamp or surround processor. If this ground link is open then mains hum can be electrically picked up at the microphone. This release detects and removes mains hum from the measurement and does so independently of any room modes at a similar frequency (e.g. 50/60Hz). However maintaining a ground connection during the measurement is the

preferred option. This can be achieved by connecting an unbalanced line cable between the surround processor sub out and the DB1 left or right stereo input (only for the duration of the measurement).

- XML save menu item always enabled

Version 1.2.0.0 - issued 2010/02/12

- Added Vista/Win7 sound card control
- SubApp Support Library is installed and downloaded separately. This reduces the size of the SubApp main program allowing smaller software updates.

Version 1.1 - issued 2010/01/26

- First public release
