

Release: **v6.0.019**

Release Date: February 2017

This update introduces the following improvements to P7 Wireless:

- The lowest volume level has been reduced, so music can be listened to at a much quieter level. The louder volume levels remain unchanged.
- There are more volume levels at the quieter end of the volume range, providing finer adjustment for quieter music listening.
- Improved audio experience during a call, providing a more natural sound and feeling.
- Conference call / VOIP (e.g. Skype) enhancements to in-call connectivity.
- Minor bug fixes and user interface improvements.

Please refer to the P7 Wireless manual for further information on the product operation and functionality.
