PV1D Firmware Release History

This list includes only those firmware versions issued in the general public domain and does not include interim versions that may have been used for internal development or limited beta testing.

Version 1.3.0.1 – issued June 2014

- Fixed bug where PV1D lost input selection when switched off at mains
- Installer now compatible with Windows OS up to 8.1
- User Interface About screen shows both hardware and firmware versions:

Product PV1D
Version 1.0/1.3.0
or
Product PV1D
Version 2.0/1.3.0

Version 1.2.0.1 – issued January 2013

- Changes to DSP.
- Fix for SubApp connection bug.
- Firmware applies extra digital gain to compensate input resistors only if hardware version 2.0 detected
- User Interface About screen shows both hardware and firmware versions:

Product PV1D
Version 1.0/1.2.0
or
Product PV1D
Version 2.0/1.2.0

Version 1.1.0.1 - issued October 2012

- Issued together with change to hardware version 2.0, where resistors were added to the input to reduce the likelihood of input overload on extreme signals.
- In order to keep the overall product gain the same, the firmware applies extra digital gain to compensate input resistors only if hardware version 2.0 detected
- User Interface About screen now shows both hardware and firmware versions:

Product PV1D
Version 1.0/1.1.0
or
Product PV1D
Version 2.0/1.1.0

Version 1.0.0.1 - issued April 2012

- First public release, issued with original hardware version (1.0)
- User Interface About screen shows:

Product PV1D
Software 1.0.0
